Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

This book is an ethnographic study of several coastal communities in the Kei Islands of eastern Indonesia. Central to Dr. Adhuri ' s argument is an insistence that systems of local marine resource management cannot be studied on their own, in isolation from either the complex cultural and historical conditions that give impetus to community action or from the equally complex regional and national contexts within which such action is undertaken.

Contains current information on hovercraft and hydrofoils.

" This well-illustrated case study . . . will help students of permaculture, of sustainability, of earth regeneration and of integrated eco-social design. " —Prof. Declan Kennedy, Chairman, Advisory Board, gaiauniversity.org To ensure food security and restore the health of the planet, we need to move beyond industrial agriculture and return to the practice of small-scale, local farming. The Bioshelter Market Garden: A Permaculture Farm describes the creation of a sustainable food system through a detailed case study of the successful year-round organic market garden and permaculture design at Pennsylvania ' s Three Sisters Farm. At the heart of Three Sisters is its bioshelter—a solar greenhouse which integrates growing facilities, poultry housing, a potting room, storage, kitchen facilities, compost bins, a reference library and classroom area. The Bioshelter Market Garden examines how the bioshelter promotes greater biodiversity and is an energy efficient method of extending crop production through Pennsylvania ' s cold winter months. Both visionary and practical, this fully illustrated book contains a wealth of information on the application of permaculture principles. Some of the topics covered include: Design and management of an intensive market garden farm Energy systems and bio-thermal resources Ecological soil management and pest control Wetlands usage Solar greenhouse design and management Whatever your gardening experience and ambitions, this comprehensive manual is sure to inform and inspire. " Darrell Frey ' s inspirational book gives you all you need to know to create an energy-saving, food-producing bioshelter . . . [It] covers everything you need to understand, build, or simply admire these important tools for sustainability. " —Toby Hemenway, author of Gaia ' s Garden

Eighteen million Vespas have buzzed their way into the world since 1946. Stood end to end, they would form a line measuring 32,000 kilometres – 20,000 miles – in length. This is an almost inconceivable statistic, as with many things that transcend conventional measures and at some point achieve cult status. How did the little machine come so far? The answer is simple. The Vespa has always remained the Vespa, true to itself, and has what others lack: real character! This book tells the Vespa ' s story via over 470 photos, corrects many misconceptions and lets the reader become immersed in the culture of Vespa and la bella vita.
