The 3 operational definitions of acids and bases include the Arrhenius, Bronsted-Lowry, and Lewis definitions.

~~Acid-Base Reactions—Definition & Classification~~

In an operational sense, an acid is any substance that increases the concentration of the H^+ ion when it dissolves in water. A base is any substance that increases the concentration of the OH^- ion when it dissolves in water. These definitions tie the theory of acids and bases to a simple laboratory test for acids and bases.

According to the Lowry-Bronsted definition, an acid is a proton donor and a base is a proton acceptor. According to the Lewis definition, acids are molecules or ions capable of coordinating with unshared electron pairs, and bases are molecules or ions having unshared electron pairs available for sharing with acids.

This reaction between the acids and bases is known as neutralization reaction. In such reactions, salt and water are produced and heat is evolved. Acid + Base = Water + Salt So, bases and acids work in sync to help our bodies function properly. Other uses. Acids and bases are often used in science and technology.

The formation of conjugate acids and bases is central to the Brønsted-Lowry definition of acids and bases. The conjugate base is the ion or molecule remaining after the acid has lost its proton, and the conjugate acid is the species created when the base accepts the proton.

An acid is a molecule or ion capable of donating a proton (hydrogen ion H^+) (a Brønsted–Lowry acid), or, alternatively, capable of forming a covalent bond with an electron pair (a Lewis acid).. The first category of acids are the proton donors, or Brønsted–Lowry acids. In the special case of aqueous solutions, proton donors form the hydronium ion H_3O^+ and are known as Arrhenius acids.
