All organisms require the input of energy in order to facilitate metabolic processes. All energy originates with the sun. This energy is converted into cellular energy by photosynthetic organisms. This energy can then be broken down further into the most basic form of cellular energy, adenosine triphosphate, ATP.

Nucleic acids are polymers (polynucleotides) that store, transmit and help express hereditary information. Monomers of nucleic acids are nucleotides. A nucleotide is made of a 5 carbon sugar, nitrogenous base, and a phosphate group. \*Genes are a specific unit of inheritance that program the amino acid sequences of a polypeptide.
