By the mid-1990s, various AWWA code committees diverged on R values. The D100 code (for steel tanks) allowed that the base shear and slosh height in the convective mode could be computed by dividing by "R"; whereas the D110 code (for concrete tanks) the R value for the convective mode is 1. In some codes, the impulsive mode and convective

Public safety is the underlying concern of AWWA Standard D100, a safeguard that has existed since 1935. Anyone dealing regularly with water storage tanks should obtain a copy of the complete standard. AWWA D100 offers two different design bases, the standard (or basic) design and an alternate design as outlined in Section 14.
