When you find difficulty in balancing the equation in the balancing chemical equations worksheet, you can miss it with a fraction of $\frac{1}{2}$ and that will easily balance the equation. But the problem is that you cannot have a fraction for the coefficient, this is why doubling all coefficients will help you balance the equation.

A chemical equation describes what happens in a chemical reaction. The equation identifies the reactants (starting materials) and products (resulting substances), the formulas of the participants, the phases of the participants (solid, liquid, gas), the direction of the chemical reaction, and the amount of each substance. Chemical equations are balanced for mass and charge, meaning the number ...
