The present book is an edition of the manuscripts to the courses "Numerical Methods I" and "Numerical Mathematics I and II" which Professor H. Rutishauser held at the E.T.H. in Zurich. The first-named course was newly conceived in the spring semester of 1970, and intended for beginners, while the two others were given repeatedly as elective courses in the sixties. For an understanding of most chapters the fundamentals of linear algebra and calculus suffice. In some places a little complex variable theory is used in addition. However, the reader can get by without any knowledge of functional analysis. The first seven chapters discuss the direct solution of systems of linear equations, the solution of nonlinear systems, least squares problems, interpolation by polynomials, numerical quadrature, and approximation by Chebyshev series and by Remez' algorithm. The remaining chapters include the treatment of ordinary and partial differential equations, the iterative solution of linear equations, and a discussion of eigen value problems. In addition, there is an appendix dealing with the qd algorithm and with an axiomatic treatment of computer arithmetic.

Every term has been traced back to its original source for which exact references have been provided. A proper understanding of the technical terminology of the Vedic ritual is a pre-condition for understanding ritualistic texts connected with the Vedas and also the sacrificial performance mentioned therein. No proper understanding of a Srautasutra is possible without knowing the basic concepts and the details of the ritualistic terms. Sketches and photographs of Vedic implements and performances are an added advantage of this lexicon, which will help the reader immensely in understanding the related terms.
