Herbal Program 1 - Sept '22 StartBush Tea, Herbs, Plants and Barbadian Botanical Stories Ep.1

This volume of the "IARC Monographs" provides an assessment of the carcinogenicity of 14 drugs and herbal products. The IARC Monographs Working Group relied mainly on epidemiological studies to evaluate the carcinogenic hazard to humans exposed to the drugs digoxin (widely prescribed for the treatment of chronic heart failure), pioglitazone (used for the treatment of type 2 diabetes mellitus), and hydrochlorothiazide (used to treat hypertension). Other agents evaluated included the drugs primidone, sulfasalazine, pentosan polysulfate sodium, and triamterene, and five herbal products (or their components): Aloe vera whole leaf extract, goldenseal root powder, Ginkgo biloba leaf extract, kava extract, and pulegone. In view of the limited agent-specific information available from epidemiological studies, assessments of these agents relied mainly on carcinogenicity bioassays to reach conclusions as to the carcinogenic hazard to exposed humans.

The definitive A-Z reference guide to essential aromatherapy oils. Aromatherapy expert Julia Lawless shares her extensive knowledge in this detailed and systematic survey of more than 190 essential aromatherapy oils. From commonly used oils such as lavender and tea tree oils to the more obscure oils including deertounge, oakmoss, cananga, and angelica, The Encyclopedia of Essential Oils offers a wide variety of uses and cures for everything from wrinkles to kidney stones. The Encyclopedia of Essential Oils gives detailed information on the most commonly available and widely used flower oils and aromatics including: the exact origins, synonyms, and related plants methods of extraction the herbal/folk tradition for each plant the uses of each plant aromatherapy applications home and commercial uses This easy-to-use volume lets you access essential information in a variety of ways with a Therapeutic Index, a Botanical Index, and Botanical Classifications, plus safety information.

Produced by the British Pharmacopoeia Commission Secretariat, The British Pharmacopoeia (BP) 2010 is the leading collection of standards for UK medicinal products and pharmaceutical substances. Now used in almost 100 countries, the BP remains an essential reference for all individuals and organisations working within pharmaceutical research and development, manufacture, and testing across the globe. Key Features: Legally effective in the UK from 1 January 2010, 40 new monographs for formulated preparations, New and revised monographs for Herbal and Complementary Medicines within their own section in Volume III, Additional standards for widely used unlicensed formulations, and European Pharmacopoeia 6th edition material up to and including Supplement 6.5. European Pharmacopoeia monographs are clearly distinguished and cross-referenced while a full index ensures easy access to the current legally binding UK standards.

This full-color text and practical clinical reference provides comprehensive information on herbal remedies for both large and small animal species. Key coverage includes clinical uses of medicinal plants, specific information on how to formulate herbal remedies, a systems-based review of plant-based medicine, and in-depth information on the different animal species--dog, cat, avian and exotic, equine, food animal, and poultry.

Volume 2 of the fullest, most exact, most useful compilation of herbal material. Gigantic alphabetical encyclopedia, from aconite to zedoary, gives botanical information, medical properties, folklore, economic uses, much else. Indispensable to serious reader. Total in set: 161 illustrations.

This encyclopedic reference work on pharmacognosy covers the study of those natural substances, principally plants, that find a use in medicine. Its popularity and longevity stem from the book's balance between classical (crude and powdered drugs' characterization and examination) and modern (phytochemistry and pharmacology) aspects of this branch of science, as well as the editor's recognition in recent years of the growing importance of complementary medicines, including herbal, homeopathic and aromatherapy. No other book provides such a wealth of detail. A reservoir of knowledge in a field where there is a resurgence of interest - plants as a source of drugs are of growing interest both in complementary medicine fields and in the pharmaceutical industry in their search for new 'lead compounds'. Dr Evans has been associated with the book for over 20 years and is a recognised authority in all parts of the world where pharmacognosy is studied, his knowledge and grasp of the subject matter is unique. Meticulously referenced and kept up to date by the editor, new contributors brought in to cover new areas. New chapter on 'Neuroceuticals'. Addition of many new compounds recently added to British Pharmacopoeia as a result of European harmonisation. Considers development in legal control and standardisation of plant materials previously regarded as 'herbal medicines'. More on the study of safety and efficacy of Chinese and Asian drugs. Quality control issues updated in line with latest guidelines (BP 2007).

Updated annually, the British Pharmacopoeia (BP) is the only comprehensive collection of authoritative official standards for UK pharmaceutical substances and medicinal products. It includes approximately 4,000 monographs which are legally enforced by the Human Medicines Regulations 2012. Where a BP monograph exists, medicinal products or active pharmaceutical ingredients sold or supplied in the UK must comply with the relevant monograph. All monographs and requirements of the European Pharmacopoeia (Ph. Eur.) are reproduced in the BP, making the BP a convenient and fully comprehensive set of standards that can be used across Europe and beyond.
