This paper reports a miniaturised triaxial force sensorized cutting tool for minimally invasive robotic surgery. This device exploits a silicon based MEMS triaxial force sensor that acts as the core component of the system. The outer diameter of the proposed device is less than 3 mm, thus enabling the insertion through a 9 French catheter guide.

Cutting tools have many shapes, each of which is described by its angles or geometry. This program, part of the Fundamentals of Tool Design Video Series, explores single-point and multi-point cutting tool geometries as well as the machining variables that affect the cutting tool design. Meaning of Cutting Tool: A cutting tool in metal working can be defined as “any tool that is used to remove metal from the work piece by means of shear deformation”. Frequently, it also refers as a tool bit. In order to perform effective cutting operation, the cutting tool must be made of a material harder than the work material to be cut.
