Deer would have used all of the resources and then starved to death. 3. Most biology textbooks describe that predators and prey exist in a balance. This "balance of nature" hypothesis has been criticized by some scientists because it suggests a relationship between predators and prey that is good and necessary.

Deer: Predation or Starvation Key

Starvation is less favorable than predation because if deer are starving then that means the ecosystem is out of balance and cannot produce enough food to support all of the deer.

Deer: Predation or Starvation

It is also possible that the decline of deer was also due to starvation and not just predation.

Read Online Deer Predation Or Starvation Answer Key

Without wolves, the deer would have eventually used all the resources and starved. This is a good discussion point to talk about the impact on OTHER animals when resources are depleted.

deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd.

Deer: Predation or Starvation

Calculate the number of deaths (predation + starvation). To determine the deer population change, subtract the number of deaths from births (births - deaths), this can be a positive number, indicating growth, or a negative number which indicates a population decline. Calculate the deer population by adding/subtracting the population change from the population the year before

Deer: Predation or Starvation

Part 3: Deer - Predation or Starvation. Introduction: In 1970 the deer population of an island forest reserve, about 518 square kilometers in size, was about 2000 animals. Although the island had excellent vegetation for feeding, the food supply obviously had limits. Thus the forest management personnel feared that overgrazing might lead to mass starvation.
