Embedded System Design: A Unified Hardware/Software ...

An embedded system designer choosing to use a general-purpose processor to implement part of a system u2019s functionality may achieve several benefits. First, the unit cost of the processor may be very low, often a few dollars or less. One reason for this low cost is that the processor manufacturer can spread its NRE cost for the processor u2019s design over large numbers of units, often numbering in the millions or billions.
