A weak fuel pump can starve the engine for fuel, causing it to stall. Other causes of low fuel pressure include a restricted fuel filter or fuel line, or a faulty fuel pressure regulator. Typically, a bad fuel injector or two will cause a misfire, but will not cause the engine to stall.

### Why Your Engine Is Stalling, and How to Stop It

If you haven't replaced the fuel filter at the recommended intervals suggested by the manufacturer (consult your car owner's manual or vehicle repair manual), replace the filter. Just as a clogging fuel filter, a worn fuel pump may not be able to maintain the adequate pressure the system requires. If too little fuel is reaching the injectors, the engine may not be able to operate properly and die during idle. A faulty fuel pressure regulator can leak fuel as well and cut out the engine at idle.

The problem occurs when the engine is running at low speeds. A pause in the flow of fuel can kill the engine. Defective fuel injectors and low pressure fuel can also cause a vehicle to stall when it is running at low speeds or when it comes to a stop.

### Car Stalls at Idle: What Causes a Car to Die While Idling ...

Often, engines that stall only at idle do so because they're getting either too much air, or not enough fuel. Leaking vacuum lines and intake induction parts are the classic suspects, but these days you have to account for exhaust gas recirculation valves stuck in the open position, and idle air control valves doing the same.

### What Causes a Car to Stall While Driving? | It Still Runs

Could be a filter issue. Since you are not positive it has to do with being below 1/4 tank, I would just replace it. It probably is overdue anyway. Otherwise, maybe there is some kind of a problem with the fuel pickup line in the tank. Maybe it is loose and floating or something when the fuel level gets low.

### Sputtering and stalling with low fuel in tank

Engine cylinder misfires caused by problematic fuel filter are usually random and do not point to a problem in a single cylinder. There is a possibility that all cylinders will be misfiring because of the insufficient amount of fuel that passes through the filter especially under heavy load.
