Engineering is the application of scientific knowledge in order to design, build, and maintain structures, machines, devices, systems, materials and processes. Engineering is often used to develop and create new technology. Many real world problems are sufficiently complex such that an engineering approach is required to solve them.

More emphasis on the topics of physics included in the SAT physics subject with hundreds of problems with detailed solutions. Physics concepts are clearly discussed and highlighted. Real life applications are also included as they show how these concepts in physics are used in engineering systems for example.

A problem to minimize (optimization) the time taken to walk from one point to another is presented. Use Derivatives to solve problems: Area Optimization. A problem to maximize (optimization) the area of a rectangle with a constant perimeter is presented.

Mathematics Applied to Physics/Engineering

Engineering Physics prepares students to apply physics to tackle 21st century engineering challenges, and to apply engineering to address 21st century questions in physics. Although Engineering Physics is a relatively new program at Stanford (it was introduced about a decade ago), it has a long history at a number of universities; see the list at the bottom of this page for examples.

Basically we can say that it is a systems approach to engineering. Graduate in engineering physics are prepared to find solutions for complex technological problems in nuclear science, aerospace, computing, etc. Most of the curriculum in engineering physics have strong emphasis on advanced mathematics, chemistry and physics. They are rigorous too.

Career in Engineering Physics

Engineering physics, or engineering science, refers to the study of the combined disciplines of physics, mathematics, biology, social science, and engineering, particularly computer, nuclear, electrical, electronic, aerospace, materials or mechanical engineering. By focusing on the scientific method as a rigorous basis, it seeks ways to apply, design, and develop new solutions in engineering.
