Answers. A population is the total collection of objects that are of interest in a statistical study. A sample, being a subset, is typically smaller than the population. In a statistical study, all elements of a sample are available for observation, which is not typically the case for a population.

Probability Mass Function. $f(x)$ - Probability mass function for a discrete random variable X having possible values x_1, x_2, \dots $f(x_i) = \Pr(X = x_i)$ is the probability that X has the value x_i . Properties. $0 \leq f(x_i) \leq 1$
P. $\sum f(x_i) = f(x_1) + f(x_2) + \dots = 1$ $f(x_i)$ can be displayed as a table or as a mathematical function.

An Introduction to Basic Statistics and Probability

Two events A and B are independent if the probability $P(A \cap B)$ of their intersection $A \cap B$ is equal to the product $P(A) \cdot P(B)$ of their individual probabilities. 3.E: Basic Concepts of Probability (Exercises)

Chapter 2 Solutions | Statistics: Concepts And ...

In general, statistics is a study of data: describing properties of the data, which is called descriptive statistics, and drawing conclusions about a population of interest from information extracted from a sample, which is called inferential statistics. Computing the single number \$8,357 to summarize the data was an operation of descriptive statistics; using it to make a statement about the ...
