## ~~I<sup>2</sup>C – Wikipedia~~

I<sup>2</sup>C or I2C is an abbreviation of Inter-Integrated Circuit, a serial communication protocol made by Philips Semiconductor (now it is NXP Semiconductor ). It is created with an intention of communication between chips reside on the same Printed Circuit Board (PCB). It is commonly usually used to interface slow speed ICs to a microprocessor or a microcontroller.

## ~~I<sup>2</sup>C or I2C – Inter-Integrated Circuit – Working Explanation~~

I2C is ordinarily pronounced “ I-two-C ” , though it is also sometimes written as IIC (and pronounced “ I-I-C ” ) or I 2 C (pronounced “ I-squared-C ” ). The acronym stands for Inter-Integrated-Circuit. It is a type of serial computer bus and communications

## ~~Section 24. Inter-Integrated Circuit (I2C)~~

The Inter-Integrated Circuit (I<sup>2</sup>C) Protocol is a protocol intended to allow multiple "peripheral" digital integrated circuits ("chips") to communicate with one or more "controller" chips. Like the Serial Peripheral Interface (SPI), it is only intended for short distance communications within a single device.

I2C is in common use on mobile devices, but has no way for slave devices to initiate communication, has pull-up resistors that limit clock rate and decrease power efficiency. In 2013, the MIPI Alliance initiated work on a common sensor standard that would keep the best features of I2C and SPI but add features that would improve sensor integration.
