The Second Law of Thermodynamics. This states that heat always flows from a hot body to a cooler one and is of fundamental significance to liquefied gas carriage. If the temperature of the sea or air is above cargo temperature, heat will flow into the cargo until the temperatures are equal. One purpose of the cargo tank insulation is to reduce the amount of the heat that leaks into the cargo.

Marine Engineering: BASIC THERMODYNAMIC THEORY

Thermodynamics. The laws and principles of thermodynamics govern the field of Mechanical Engineering. Whenever an engineer wants to design a motor or system they must take into account laws of energy, motion and friction that will effect how the machine works. Learn more about this field, including the basic laws and rules, and how to apply these rules to the development of machines and technologies.

Expansion joints are one of the important joints used in construction, like the roof expansion joints and in the paving slabs. The function of the expansion joints is to endure the stresses produced due to temperature variations. Flexible concrete expansion joints may reduce crack formation. However, cracks developed may be repaired by using suitable concrete sealer.
