Mastering Simulink: Dabney, James, Harman, Thomas ...
For courses in Control Theory and Operational Amplifiers. Ideal for use with Simulink 5 and later versions, this text covers all of the important capabilities of Simulink including subsystems, masking, callbacks, S-Functions, and debugging. Its full range of coverage makes the text suitable for new users of Simulink as well as experienced and advanced users—allowing all students to take full advantage of the power of Simulink.

A developing simulink block library is described which contains elements to assist the teaching of undergraduate and postgraduate courses in process control. The library contains specialised component blocks for basic and unit processes, such as a pump, a tank, a pipe, a control valve, a heat exchanger, a chemical reactor and a distillation column.
