A 2019 study found that smaller meteotsunami waves strike the east coast of the U.S. more than twenty times a year! Tides. Tides are actually waves, the biggest waves on the planet, and they cause the sea to rise and fall along the shore around the world. Tides exist thanks to the gravitational pull of the Moon and the Sun, but vary depending on where the Moon and Sun are in relation to the ocean as Earth rotates on its axis.

we see water moving in the form of waves. Below the surface the water moves in great currents. Ocean Waves One of the things many people love about the ocean is the waves. People love to play in the waves, surf the waves, and the sound of the waves crashing on the beach.

Earth Science for Kids: Ocean Waves and Currents

What is the difference between Tides and Waves? • Tides are periodic rise and fall of large masses of water. They are caused by the gravitational interaction that exists between the Earth and the Moon. • On the other hand, waves are caused by the winds blowing on the surface of the ocean or even lakes. This happens all the time. • Tides only occur in the oceans, while waves can be seen in any water body.
