~~Selinux By Example Using Security Enhanced Linux David Caplan~~

SELinux is the security implementation which enhances system security and in the event of security breach, it stops that from spreading in entire system. Before we understand SELinux in details, let's take an example to figure out why do we need the SELinux? Suppose we are running a web server which hosts several websites.

~~SELinux Explained with Examples in Easy Language~~

1. Change the Full SELinux Context. To view security context of a file, use -Z (uppercase Z) option in the ls command as shown below. # ls -lZ httpd.conf -rw-r--r--. root root unconfined\_u:object\_r:admin\_home\_t:s0 httpd.conf In the above example, the security context of the httpd.conf file is the following:

~~15 SELinux cheon Command Examples to Change Security Context~~

Security-Enhanced Linux (SELinux) is a security architecture for Linux® systems that allows administrators to have more control over who can access the system. It was originally developed by the United States National Security Agency (NSA) as a series of patches to the Linux kernel using Linux Security Modules (LSM).
