Phase And
Solid phase
microextraction, or
SPME, is a solid
phase extraction
sampling technique
that involves the
use of a fiber
coated with an
extracting phase,
that can be a liquid
or a solid, which
extracts different
kinds of analytes

from different kinds of media, that can be in liquid or gas phase. The

quantity of analyte extracted by the fibre is proportional to its concentration in the sample as long as equilibrium is reached or, in case of short time pre-equilibrium, with help of
