Bacon? Why do the stock markets rise and fall sharply on the strength of a vague rumour? How does gossip spread so quickly? Are we all related through six degrees of separation? There is a growing awareness of the complex networks that pervade modern society. We see them in the rapid growth of the Internet, the ease of global communication, the swift spread of news and information, and in the way epidemics and financial crises develop with startling speed and intensity. This introductory book on the new science of networks takes an interdisciplinary approach, using economics, sociology, computing, information science and applied mathematics to address fundamental questions about the links that connect us, and the ways that our decisions can have consequences for others.

New materials enable advances in engineering design. This book describes a procedure for material selection in mechanical design, allowing the most suitable materials for a given application to be identified from the full range of materials and section shapes available. A novel approach is adopted not found elsewhere. Materials are introduced through their properties; materials selection charts (a new development) capture the important features of all materials, allowing rapid retrieval of information and application of selection techniques. Merit indices, combined with charts, allow optimisation of the materials selection process. Sources of material property

Case studies are developed as a method of illustrating the procedure and as a way of developing the ideas further.

Sport psychology is a topic of growing interest. Many professionals read journals such as The International Journal of Sports, Journal of Sport Behavior, Journal of Applied Sport Psychology, Research Quarterly for Exercise and Sport, and The Sport Psychologist. In August 2008, Monitor on Psychology, the monthly publication of the American Psychological Association (APA),

featured a special issue on sport psychology. Indeed, Division 47 of APA is devoted to "the scientific, educational, and clinical foundations of exercise and sport psychology." The North American Society for the Psychology of Sport and Physical Activity (NASPSPA) and the Association for the Advancement of Applied Sport Psychology (AAASP) convene conferences each year to present scientific findings and new developments in a rapidly expanding field. The AAASP and other organizations also qualify professionals as certified sport and exercise psychology consultants. Finally, a visit to any bookstore will reveal the lay public's fascination with sports, as revealed in numerous self-help books and guides to perfecting athletic performance. Behavioral

psychologists have studied sport psychology for more than three decades (Martin, Thompson, & Regehr, 2004). Applied behavior analysis (ABA), in particular, has been an instrumental approach to behavioral coaching in many sports, including baseball (Osborne, Rudrud, & Zezoney, 1990), basketball (Pates, Cummings, & Maynard, 2002), figure skating (Ming & Martin, 1996), football (Ward & Carnes, 2002), golf (Pates, Oliver, & Maynard, 2001), ice hockey (Rogerson & Hrycaiko, 2002), soccer (Brobst & Ward, 2002), swimming (Hume & Crossman, 1992), and tennis (Allison & Ayllon, 1980). ABA stresses the application of learning theory principles, objective measurement of athletic skills, controlled outcome evaluation, and socially significant behavior-change. Cognitive behavior

therapy, or CBT, also has been a dominant approach to psychological intervention in sports (Meyers, Whelan, & Murphy, 1996; Weinberg & Comar, 1994). CBT addresses athletic performance through cognitive-change methods combined with behavioral practice and environmental modifications. The purpose of the book described in this proposal is to compile the most recent experimental and applied research in behavioral sport psychology. Several journal articles have reviewed critical dimensions of behavioral sport psychology (Martin et al., 2004; Martin, Vause, & Schwartzman, 2005) but no book has covered the topic with an emphasis on ABA and CBT methodology and practice. Accordingly, Behavioral Sport Psychology: Evidence-Based Approaches to Performance
