In 2002, Toyota introduced a new member of the MZ series -
the 3MZ-FE. It was a 3.3-liter V6 gasoline engine, which

became an alternative to Toyota's late 3.0L 1MZ with VVT-i.

Both engines have the same architecture and design

features. The 3MZ differs mainly by its 3.3-liter capacity and
10.8:1 compression ratio.

The result was less cylinder distortion coupled with the decreased weight of rotating assemblies, smoother operation at that engine speed, and increased engine efficiency.
