File Type PDF

Water Mist

Water mist catchers are installed directly after the air coolers to prevent water droplets from entering the cylinders. If water enters the cylinders, the oil film on the cylinder liner can be ruptured, resulting in scuffing and clover-leafing on the cylinder liner surfaces.

Procedure for Inspection

Page 18/34

File Type PDF

Water Mist

Pistons and Cylinder

Liners

Pressurized water is added to the intake air after the turbocharger to reduce the combustion temperature and thereby the formation of NO_x.

The water evaporates immediately and enters the cylinders as steam, lowering the combustion

temperature. A water

File Type PDF

Water Mist

mist catcher prevents water in liquid state from entering the cylinders. The NO_x reduction is up to 40%, and the water consumption is about two times the fuel oil consumption.
